INTRODUCE NEW METAL-WORKING METHODS

The work of Technicians and innovators was evaluated during a recent mosting of the Executive Committee of the Central Club of Technicians and Innovators.

Among the new methods which have become popular are the electrocrosive method of turning metals, the use of propane-butane [gas] for cutting metals, high-speed turning, die casting, and the production of injection molds and stamping dies by the electrolytic method.

Technicians and innovators introduce new methods in individual plants with the aid of lectures and motion pictures.
